EDUCATION

University of Houston Downtown – Houston, TX
Bachelor of Science in Computer Science

Expected Graduation: May 2027

SKILLS AND RELEVANT COURSEWORK

Software: Python, C/C++, Java, JavaScript, HTML/CSS, Node.js, Express, pytest, Git/GitHub, Linux, Microsoft Excel, Google Workspace

Languages: English and Spanish

Relevant Coursework: Data Structures and Algorithms, System Administration, Computer Security, Network Architecture

INDUSTRY EXPERIENCE

Handshake – Houston, TX October 2025 – Present

Artificial Intelligence Fellowship

- Completed 110+ evaluation and data-generation tasks across three concurrent AI research contracts, contributing training and alignment data for frontier language models.
- Designed web-dependent adversarial prompts to stump frontier LLMs, identifying authoritative sources and authoring gold-standard search trajectories documenting the intended retrieval path for each answer.
- Evaluated model responses against structured rubrics for accuracy, reasoning depth, and communication, assigning preference rankings used as human feedback; extended evaluations to PDF, JSON, and Excel inputs to improve structured document parsing.

LEADERSHIP AND COMMUNITY SERVICE

Association for Computing Machinery (ACM) / CAHSI – Houston, TX October 2024 – Present

VP of Logistics

- Cold-contacted 60+ local technology companies to bring recruiters on campus, securing commitments from 15 (25% conversion) to speak with members about internship openings.
- Planned and executed 7 technical workshops spanning Git/GitHub, Python, Robot Operating System, cybersecurity, Arduino, and coding interview preparation, coordinating speakers, venues, and materials end to end.
- Managed the chapter's LinkedIn presence and website, publishing event promotion and membership updates.
- Ran logistics for the chapter hackathon and incoming Robotathon, handling scheduling, equipment, and day-of operations.

PERSONAL PROJECTS

- **Music Recommender Simulation (March 2026)** – Built a Python CLI recommender scoring a 60-song catalog on genre, mood, and energy with transparent per-result score breakdowns and Gemini API-generated natural-language insights; wrote 15 pytest unit tests that surfaced a silently disabled scoring feature and added a regression test to prevent recurrence.
- **Garden Quiz (April 2026)** – Developed a full-stack Node.js/Express personality quiz routing 10 user answers through the Gemini API to match respondents to a color and paired Texas native plant; built a password-protected admin dashboard over key-value storage and hardened the app with server-side key handling, endpoint rate limiting, and input sanitization.
- **Wilderness Hunt (August 2026)** – Built a 2D top-down hunting game in Processing/Java featuring six-way directional sprite animation, reactive animal AI that flees on player proximity, a 60-second timed scoring loop across three animal types, and high scores persisted between sessions.

HONORS AND AWARDS

- **CodePath Certification of Completion with Honors (2026)** – Completed the AI110 and AI301 courses with honors distinction.
